Simulating memory effects with discrete dynamical systems
[Physica A 195 (1993) 417]

Jason A.C. Gallas

- (1) The sentence starting the paragraph above eq. (7) on page 427 should read: "What happens when the degree of the nonlinearity is increased in the discrete model of the Duffing equation?"
- (2) The particularly fruitful example mentioned in the last sentence of the paper should read $x_{t+1} = a - x_{t-\tau}^2$ (instead of $x_{t+1} = a - x_t^2 - \tau$).
